

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A panel-type speaker mounting structure comprising:
a liquid crystal display (LCD) window having a first surface exposed on the a top end of
an upper casing frame of a main body and a second surface facing an interior of the main body;
and

an LCD module disposed under the LCD window with a gap between the LCD module
and the LCD window within the main body, and the LCD module having a polarizing plate
having an upper surface facing the second surface of the LCD window and a lower surface
opposite the upper surface, the polarizing plate being divided into a first portion corresponding
located adjacent to the LCD window and a second portion extended from the first portion, for
mounting a panel-type speaker to the lower surface of the second portion of the polarizing plate.

2. (Previously Presented) The panel-type speaker mounting structure of claim 1, wherein
the second portion of the plate is extended in a predetermined direction below the LCD window
away from a top portion of a device.

3. (Currently Amended) The panel-type speaker mounting structure of claim 1, wherein
the polarizing plate is made from a polarizing material.
